

ALL-NEW INFINITI QX50

ENGINEERED AROUND YOU

Driver-centric, passenger-minded: technologies enhance the driving experience and create a calm, connected, and co-operative space

Interior roominess facilitated by space savings within the engine bay. The QX50's highly compact 2.0-liter VC-Turbo engine occupies less space

INFINITI engineers combined computer simulation with real-world road testing in developing the new platform. The QX50 provides the ideal balance between ride comfort and driving performance

The new platform also enables the QX50 to achieve 218 mm (8.6 inches) ground clearance without impacting on cabin space

The QX50's new platform presents advantages for both the driver and passengers. Efficient packaging maximizes the amount of interior space, making for unrivaled roominess and flexibility

The trunk accommodates three golf bags, hidden under-floor storage compartments can be used to stow valuable items

Cabin is made more flexible with its sliding rear bench. The cargo area is 990mm deep with the rear bench all the way back – increasing to 1,140 mm with the seats moved forward

Efficient packaging maximizes the amount of interior space within the QX50, with an expansive cabin and minimal intrusions by the bodywork and trim

The new platform is built for both front-wheel drive (FWD) and all-wheel drive (AWD) powertrains, making it very suitable for the QX50's intelligent AWD drivetrain
